Issues for IIS project

Group 5

May 2017

1 Issues

1.1 library problems

first, we want to use kinect to capture the pose, but we encounter a problem that the c++ library ????? was very old. so we change the

1.2 operation system

Our group members just have mac OS and no windows operation system. however, on mac and Linux the pykinect can not work , so we need Windows. in the end, we determined to go to the lab to do our project jobs.

1.3 installation problems

our when we want to install the pygame and visualization, but installation can not be completed without no ad password of the computer in the lab, we encountered a lot of problem, and because we have no the administrator password, finally, we have to ask TA for help, and wait fro the IT manager to help us.

1.4 strategies

we use many methods, and take much time, therefore cannot make the connection work, finally, we use the data we have already i.e. simulation's poses' angles to train our model
